

## **High Yield Routines in a Virtual or Hybrid Setting**

**Presented by Skip Tyler, NBCT, Educational Specialist  
High School Mathematics, Henrico County Public Schools**

High-yield routines contribute to the success for all students by allowing entry points to mathematics instruction while strengthening student number sense. Can it be done in a virtual or hybrid setting? Most definitely! Come to this session to learn how to incorporate examples that can be used in both the elementary and secondary settings to foster discourse, encourage reasoning and justification and allow for formative assessment on a daily basis. Participants will engage in routines that feature number strings, today's number, mystery number and quick images that focus primarily on developing number sense and reasoning. Example content will span all grade levels 6-8 to allow participants the opportunity to see how each routine can be adapted to a virtual setting.
